Localstorage

Prof. Fabio Ciravegna
Dipartimento di Informatica
Università di Torino
fabio.ciravegna@unito.it

Storage on the Browser

- There are two types of storage locations:
 - local storage
 - mostly used for settings
 - it has a limit (at least 5M)
 - equivalent to Preferences in Android
 - databases
 - fully fledged databases that allow to store relevant amounts of information
 - Web Storage
 - Indexed DB
 - Caches

Step 3 - Creating Functions

Now we need to create functions that will be called when the buttons are tapped. First function is used for adding data to local storage.

```
function setLocalStorage() {  
    localStorage.setItem("Name", "John");  
    localStorage.setItem("Job", "Developer");  
    localStorage.setItem("Project", "Cordova Project");  
}
```

The next one will log data we added to console.

```
function showLocalStorage() {  
    console.log(localStorage.getItem("Name"));  
    console.log(localStorage.getItem("Job"));  
    console.log(localStorage.getItem("Project"));  
}
```
