1. Containers:

Exercise: Create a Bootstrap container with a fixed width of 800px and center-align its content.

2. Grid:

Exercise: Build a responsive grid layout with three columns for displaying images. Ensure that the columns stack vertically on smaller screens.

3. Tables:

Exercise: Design a Bootstrap table with alternating row colors and a hover effect. Populate it with sample data.

4. Images:

Exercise: Create an image gallery using Bootstrap's grid system. Use the img-fluid class to make the images responsive.

5. Alerts:

Exercise: Implement a set of Bootstrap alerts (success, info, warning, and danger) with dismissible functionality.

6. Modals:

Exercise: Build a modal dialog that displays additional information when a button is clicked. Include a title, content, and a close button.

7. Buttons and Dropdowns:

Exercise: Create a button group with three buttons (primary, secondary, and success). Add a dropdown button with two menu items to the group.

8. Collapsible Elements:

Exercise: Develop an FAQ page with questions as headings and collapsible answers. Use Bootstrap's collapse component to achieve this.

9. Navbar:

Exercise: Construct a responsive Bootstrap navbar with a brand/logo, navigation links, and a mobile hamburger menu for small screens.
